

Abstract of the Disclosure

The present invention is a portable device for rocking objects such as baby carriages and strollers. The device comprises a base, a motor, a gear, a sliding member and a fastening means. The gear is attached to the shaft of the motor and the sliding member is attached to the gear. Attached to the sliding member is a fastening means for fastening the present invention to the device to be rocked, When the present invention is activated the rotational motion of the motor is converted into a linear motion with an adjustable length and speed. When attached to an object such as a baby stroller, the present invention rocks the object back and forth.
